Building Codes: Which version applies to your project?

The International Building Code or IBC is the "bible" of building designs and this holds true for modular and portable buildings as well. At Parkline, we are in constant contact with our Third Party Review Agencies and State/Local code officials to determine the correct codes for your building design.

Changes in parts of the reference standard can result in disconnects or even direct conflicts between the corresponding editions of the reference standards, hence the need to ensure that your project is in compliance with the applicable code at the time of installation.

Additionally, these codes play a major role when the building must be installed in a location that is subject to a **State Modular Building program**.

For most, simply identifying the applicable code can be a daunting task, let alone ensuring that the building you need meets the correct code version. At Parkline, we have a designated team

assigned to the specific task of ensuring that our staff is up to date on the applicable codes for any given application and that the building design adheres to those codes. Do you know which codes are applicable to your projects? [Click here for more information on applicable building codes and let the experts at Parkline guide you!!](#)

...and be sure to keep an eye out for our upcoming newsletter on the changing Energy code requirements and the impact they have on your projects.

A message from Bill Estep - President and CEO, Parkline, Inc.

August Customer News

There is an old business story about commitment. "A chicken is involved in the creation of a bacon and egg breakfast, but the pig is committed". When retold at Parkline, it is often because we are trying to move fast, solve customers' challenges and drive change. This fable may be followed with a simple open-ended question such as; "What capabilities do we need to make this work better for the customer?"

Commitment and capabilities are two important factors required to consistently deliver on time projects and satisfy customers.
