Light Gauge Solutions to Heavy Weight Applications

Parkline Inc. integrates a wide variety of industrial buildings with field tested, creative design innovations that utilize lighter gauge material solutions for projects that typically require the use of heavy gauge materials without sacrificing necessary strength.

Design Standards combined with Ingenuity:

Maintaining the industry standard use of 16" Wide x 3" Deep Wall panels was a priority for our design team, but we also needed to lighten the overall weight of the structure. Utilizing materials with a higher yield strength than other manufacturers, we are able to accomplish this goal with a design that has been field tested and proven for more than four decades. Click here to read more about the strength of our Light Gauge Building Design. [Click here to read more about the strength of our Light Gauge Building Design.](#)

Innovative Solutions with Savings in Mind:

Parkline's utilization of pre-coated materials allows us to provide our clients with a high performance finish without the delays and costs a traditional paint system can incur. In keeping with our desire to provide effective solutions for a wide range of clients, we currently offer a variety of six different color options, including the most popular colors of Arctic White and Desert Tan. [Click here to read more about the available coating options.](#)

Convenient Build Options:

In addition to our design innovations, we also offer our clients the option of Factory or Field Assembled buildings. We also allow you to choose the level of integration that works best for your application. We specialize in not only the basic integration package, including lighting and receptacles, but also in the fully integrated "plug and play" building packages.
