***A message from Bill Estep - President and CEO, Parkline, Inc.***

We are pleased to share our first Parkline Newsletter with you!

As you may know, Parkline recently acquired the assets and hired the employees of Bebc Industries. I am excited about the incredible opportunity that the new Parkline team has to deliver significant value to our customers by helping you protect your valuable industrial assets. We are focused on building a winning company that is dedicated to exceptional customer service, quality and employee safety. Exciting times are ahead! Along the way, I invite you to let us know how we are doing. Exceeding your expectations is one of the ways we will define our success.

## **Quality Products to Serve Your Critical Needs!**

Whether you're providing a safe haven during a disaster or protecting your valuable equipment for everyday use, at Parkline we take pride in providing our customer with the highest quality buildings and electrical integration services, to meet your needs and specifications from each of our manufacturing locations.

Our new Hitchcock, Texas location specializes in those structures that don't fit the standard manufacturing mold. From Blast Resistant Buildings and buildings with oversized dimensions to buildings constructed with non-typical materials and even buildings that don't conform to traditional shapes, you will see the same exceptional quality in manufacturing from Parkline, no matter the application! Our new Texas facility specializes in modular factory built buildings. From our Texas facility, we offer both basic building configurations or turnkey electrically integrated systems to meet customer needs.

As you know at our Eleanor, West Virginia location, we not only manufacture our 18-24 gauge pre-assembled shelters for your "plug and play" applications, we also offer full electrical integration to simplify your site construction processes and provide you with a one-stop purchasing experience. In addition, we can also ship most buildings in kit-form for field erection and provide field services to assemble and electrically integrate those applications where having the work done at your site is a necessity, all with the attention to detail and quality workmanship we strive for on every project.

**The most **COMPREHENSIVE****
